A MESSAGE ABOUT POLIO

Health Departments, doctors, hospitals and Chapters of the National Foundation for Infantile Paralysis have made plans for help and medical care if polio should come.

WHAT TO DO IF POLIO COMES YOUR WAY

Keep children with their own friends

Keep them away from people they have not been with right along, especially in close, daily living. Many people have polio infection without showing signs of sickness. Without knowing it, they can pass the infection on to others.

Try not to get over-tired by work, hard play or travel

If you already have the polio infection in your body, being very tired may bring on serious polio.

Keep from getting chilled

Don't bathe or swim too long in cold water. Take off wet clothes at once. Chilling can lessen your body's protection against polio.

Keep clean

Wash hands carefully before eating and always after using the toilet. Hands may carry polio infection into the body through the mouth. Also keep food clean and covered.

Watch for early signs of sickness

Polio starts in different ways—with headache, sore throat, upset stomach, sore muscles or fever. Persons coming down with polio may also feel nervous, cross or dizzy. They may have trouble in swallowing or breathing. Often there is a stiff neck and back.

ACT QUICKLY—IT MAY LESSEN CRIPPLING

Call your doctor at once

Until he comes, keep the patient quiet and in bed, away from others. Don't let the patient know you are worried. Your doctor will tell you what to do. Usually polio patients are cared for in hospitals, but some with light attacks can be cared for at home.

Call your own Chapter of the National Foundation for Infantile Paralysis if you need help

(Look for the number in the telephone book or call your health department for the address.) Chapters are made up of people in your own town or county, banded together to give help to polio patients. Polio is a very expensive disease to treat. *But no patient need go without care.* You pay what you can afford—your Chapter pays the rest of the cost of care.

This help includes payment of hospital bills, nurses and physical therapists, transportation to and from hospitals or clinics, treatment after the patient leaves the hos-

pital, wheelchairs and braces when needed. This is not a loan. The American people make these services possible by giving to the March of Dimes.

Remember—there is no "quick cure" for polio and no way as yet to prevent it.

With good care, most people get well, but some must have treatment for a long time.

The more you know about polio, the less you fear

More than half of all people who get the disease recover completely without any crippling.

IF POLIO COMES, ACT QUICKLY. CALL YOUR DOCTOR. DO WHAT HE SAYS. ASK FOR HELP IF YOU NEED IT. YOUR NATIONAL FOUNDATION CHAPTER IS STANDING BY TO AID YOU.

MORE FACTS ABOUT INFANTILE PARALYSIS IN 1950

Polio is caused by a virus. A virus, like a germ, can cause disease. Some other diseases caused by different viruses are chickenpox, measles and influenza.

The polio virus probably enters the body through the mouth. In some people it may then attack the nervous system. When nerves are injured by the polio virus, muscles are weakened or paralyzed. Often nerves get well again and there is no paralysis.

Polio is "catching" especially for children under 10. But people of any age can get it.

Many people may have the polio virus in their bodies without becoming ill. It is found in the throat and intestines. No one knows just how this virus gets from person to person.

Usually polio spreads in families. When one member has polio, others in the family often have the virus in their bodies but do not always become ill. Friends and other close associates of the family may have it, too. It spreads among people who are together in the close, daily living of a home.

It usually takes 7 to 14 days to come down with polio after you have been infected with the virus.

When polio is in the community, doctors believe it is better to put off tonsil and adenoid operations, if possible.

More people have polio in summer and fall than in other months of the year.

Many scientists are studying this disease. The March of Dimes provides the money for their work. Already they have discovered new ways of treatment to save lives and lessen crippling.

TODAY THERE IS GREAT HOPE THAT A WAY TO *STOP* POLIO WILL BE FOUND. SOME DAY CHILDREN—MEN AND WOMEN, TOO — WILL BE PROTECTED AGAINST IT.
